1	Message	Thanks	2015/12/18	A very big thanks to all involved in assembling this course!!! Excellent job! Hope there is more in the future	jerryjbrown			
2	Message	Thanks	2015/12/17	Dear friends: it was a pleasure for me to absolve this so important and sympatic online course, now I can say, the Homunculus is free with own will to decide if is prepared to walk or to fly.....	Jakubko			
3	Message	Thanks	2015/12/17	I said this in the ending survey, but just in case you're not reading that: A very enjoyable way of finding out more about the natural world and remembering some biology and chemistry from a long time ago. Good to refresh my memory of some concepts that may come in useful as I change careers. Enough depth and material to be interesting, but not so much that the course felt stressful. Thanks!	nicecupoftea			
4	Message	Thanks	2015/12/16	I'd like to thank all staff providing this great course for us, in particular, Prof. Harry Atomi. The course materials was very well-organized and explained very neatly and clearly. I really enjoyed taking part in this course. Although I don't major in biology, but the material really broadened my view of extent of life. So intriguing! Thank you for making this course available! :)	AryaEbadi			
5	Message	Thanks	2015/12/14	A heart-felt thank you for this course. I have enjoyed it very much and have learned more than I was aware of. Thank you prof. Atomi for the gentle and clear exposition of the subject matter, and equally for conveying a genuine sense of wonder as both the source and product of science. I was inspired and motivated by your description of the search for the PPS enzyme. It made me realise again how lucky I am to be able to do the work I do. Thank you to the whole team for creating an experience which felt live and intimate, and not at all the distant learning experience I imagined it to be (and have indeed experienced in other courses). The feeling that the course was being given person to person made it a joy to hop from Africa to Kyoto	zwets			
6	Message	Thanks	2015/12/14	A great course ! Thanks for offering such an interesting course. But it's a pity that this course only have 4 weeks lecture.... And look forward to more advanced courses :) Please imform me if there are advanced courses about microorganism !	NishikinoMaki	2015/12/15	Yes, I would enjoy taking a course that took this information to the next level!	mycophagist
7	Message	Thanks	2015/12/14	Thank you so much for organizing this course. Good look with your research projects!!!	Lisetb92			
8	Message	Thanks	2015/12/14	Thank you very much for this course, the course was both fun, interesting and educational.	Nlawrence			
9	Message	Thanks	2015/12/11	It was a great, interesting course, and I learned a ton!	Shushila			

10	Message	Thanks	2015/12/11	Dr. Atomi, Thanks a lot for the course. You have the great ability to present very clearly this complex themes. I enjoyed all your clips. Thanks from Mexico Carlos	carbonsu			
11	Message	Thanks	2015/12/10	Thank you to the Professor and the entire team for this excellent course!	markmarz	2015/12/10	This was a wonderful course, I hope you will make more in the future. Virus or Synthetic Biology?	Josh_Melnick
12	Message	Thanks	2015/12/10	Thank you very much for having given this course! For me there is much to think over. I had never realized, that there is such a tremendous diversity of life on our planet. I was attracted to this course, because nature around me fascinates me very much. But the last time, that I did biology was at school in the 60's..... So you can imagine, that at some point in this course I became dizzy of all those mentioned extremophiles in all those different environments with all their specific behaviour. But the explanation is very clear, so I could stay tuned. Thanks!	Marjati			
13	Message	Thanks	2015/12/10	Thanks to all the team at Kyoto for the course. Some interesting material and research – much appreciated. All the best for future iterations of the course.	GerardDunne	2015/12/10	Seconded! This is my first online course with edX that I've done and it's really interesting.	WinterCloud
14	Message	Thanks	2015/12/10	Thanks to all the team at Kyoto for putting the course together. Some interesting material and research, and much appreciated. I hope further iterations of the course go well.	GerardDunne
